SYNOPSIS

This research undertakes a thorough exploration of the intricate dynamics characterizing socio-cultural linguistic interactions within multicultural urban communities, with a specific emphasis on language usage patterns. Employing a qualitative methodology, the study meticulously examines data gathered through participatory observation and interviews conducted with individuals representing diverse cultural and linguistic backgrounds. The findings illuminate the central role played by identity, power dynamics, and stereotypes in shaping the formation and utilization of language within the complex tapestry of multicultural societies. Individuals navigate their language choices based on perceived power dynamics and societal expectations associated with their cultural identities, highlighting the profound interplay between socio-cultural factors and linguistic practices. Furthermore, the study underscores the influence of cultural blending and technological advancements on language usage, showcasing how interactions among diverse cultural groups contribute to the rich linguistic diversity observed in urban settings. By offering a comprehensive analysis, this research provides valuable insights into the nuanced ways in which socio-cultural contexts shape language interactions, thus contributing to a deeper understanding of intercultural communication dynamics and offering implications for promoting social cohesion within multicultural communities. Ultimately, this study underscores the significance of recognizing and appreciating the complexities inherent in language use within diverse urban environments, paving the way for more inclusive and effective communication strategies tailored to meet the needs of multicultural societies.
1. Introduction

Social interaction plays a deeper role than just shaping cultural identity; it also serves as a platform for the preservation and development of that identity within a complex social framework. In this context, social interaction is not only a process of shaping cultural identity but also a continuous dynamic that supports the sustainability and evolution of identities in multi-layered, multicultural, and interconnected societies (Crocetti et al., 2023; Kim, 2018; Stapleton, 2015).

Urban communities are considered the main stage where various ethnic, religious, and cultural groups meet and interact. This diversity creates a highly relevant observation field for analyzing socio-cultural linguistic phenomena. In this context, language is considered the primary instrument for maintaining and expressing cultural identity (Joseph, 2004; Lo Bianco, 2010).

Language, as the primary tool, not only reflects cultural identity but also serves as a vital bridge for forming shared meanings and collective understanding in multicultural societies (Aliyeva, 2023; Jackson, 2019). Cultural differences are reflected not only in linguistic variations but also in how multicultural societies use language to shape shared narratives, depict history, and strengthen community bonds. Amidst a multicultural environment, language also becomes a source of change and adaptation in communication (Bonvillain, 2011; Wilczewski & Alon, 2023). However, with global changes and technological advancements, urban communities are experiencing dynamic shifts in language interaction patterns (Gogolin et al., 2013; Smakman & Heinrich, 2017).

Furthermore, urban communities use language as an active social tool, engaging in various community activities, cultural events, and other social gatherings. Language becomes the primary medium in social interaction, shaping communication norms and creating complex interpersonal relationships in multicultural contexts (Diessel & Coventry, 2020; Owen, 2020).

Several studies have described the significant role of language in reflecting and shaping social and cultural identities in societies composed of diverse ethnic, religious, and cultural groups. Previous Research (Lebedko, 2014; Moffitt & Syed, 2021) demonstrates how factors such as ethnic identity and stereotypes influence conversation patterns among different ethnic groups in multicultural societies. Similarly, previous research (Darvin, 2016; Gudmanian et al., 2019) identifies changes in language use in the context of modern multiculturalism, especially concerning the influence of technology and social media.

Social interaction forms a strong foundation for shaping and nurturing rich and diverse cultural identities. Indonesia, as a country consisting of various ethnicities, religions, and cultures, provides a unique stage where social interaction shapes distinct narratives of diversity (Bazzi et al., 2019; Buttenheim & Nobles, 2009; Jamiludin et al., 2023).

Urban communities in Indonesia serve as meeting points for different ethnic, religious, and cultural groups (Forshee, 2006; Kusno, 2014; Leisch, 2002). This diversity creates a highly relevant observation field for understanding the dynamics of socio-cultural linguistics within diverse societies. In this context, language not only serves as a tool for expressing cultural identity but also as a living heritage reflecting the history, traditions, and values of diverse communities (Cohn & Ravindranath, 2014; Kuipers & Yulaelawati, 2009).
Ethnic identity and stereotypes play a role in communication patterns among ethnic groups in Indonesia (Goebel, 2010, 2016; Mailin et al., 2023). Changes in language use are also influenced by technology and social media in everyday life. Previous research (Pepinsky et al., 2022; Susanto, 2018) highlights these changes and provides perspectives on how technology shapes language interaction patterns in multicultural Indonesian society.

West Kalimantan, as one of the provinces on Kalimantan Island, Indonesia, is unique in its ethnic and cultural diversity, especially in the context of diverse ethnic groups such as Dayak, Malay, and Chinese living side by side. In supporting this understanding, previous research (Fannia et al., 2023) describes ethnic and cultural diversity in West Kalimantan, emphasizing the importance of acknowledging local identities and community diversity.

The importance of language as a primary communication tool reflecting diverse identities amidst ethnic and cultural diversity is highlighted. Language plays a role in preserving and expressing diverse cultural identities in Indonesia, including in West Kalimantan.

In traditional realms, where language also plays a role in various customary rituals, religious ceremonies, and local traditions in West Kalimantan (Amin et al., 2021; Collins & Herpanus, 2018), this approach is further reinforced by research findings by (Forshee, 2006), exploring the significance of language in the context of rituals and local traditions in Indonesia.

The solidarity reflected in the use of language as a medium reflecting inter-group solidarity is also supported by previous research (Dakan, 2010; Goebel, 2016), discussing how language serves not only as a functional communication tool but also as a promoter of social solidarity and community cohesion in diverse societies.

Previous research comprehensively describes social interaction, cultural identity, and the role of language in multicultural societies in Indonesia, particularly in West Kalimantan. However, several research gaps need to be addressed. First, there needs to be a greater emphasis on recent developments in social interaction influenced by technology and social media in multicultural societies. Second, there has not been specific research highlighting how local identities and diversity in West Kalimantan are reflected in language use. Furthermore, a lack of in-depth understanding of the role of language in community activities and traditional rituals in West Kalimantan and its impact on social solidarity is also a focus of research gaps. Therefore, this research aims to fill these gaps by examining in detail the role of language in the context of social interaction and cultural identity in multicultural Indonesian society, especially in West Kalimantan. It is hoped that this research will contribute new insights by providing a deeper understanding of the influence of technology, local identities, and the role of language in community activities and traditional rituals, thus providing a richer insight into the field of socio-cultural linguistics, linguistic anthropology, and cultural studies.

2. Literature Review

2.1. Cultural Identity in the Context of Multiculturalism

Cultural identity is a crucial factor in the diversity of multicultural societies that shapes the complexity of social interactions. Identity as a dynamic construction is not static but influenced by cultural dynamics and contextual factors (Briley et al., 2014; Phinney & Baldeolmar, 2011). Cultural identity extends beyond physical characteristics or ethnic backgrounds, involving a sense of belonging, shared understanding, and how individuals or groups interpret themselves in a constantly changing multicultural environment.

Previous studies (Berry, 2005; Oyserman et al., 2002; Phinney & Ong, 2007) detail crucial dimensions in understanding cultural identity by emphasizing social identity formation and social categorization. These theories indicate humans’ tendency to categorize themselves and
Dynamics of Language Interaction in Multicultural Urban Communities: Analysis of Socio-Cultural Linguistic Environment

others based on certain characteristics, including cultural elements. In the reality of multicultural societies, this process becomes increasingly complex as individuals encounter overlapping identities. Consistent with this research (Gee, 2000; Phelan & Kinsella, 2009) also highlight how cultural identities today are often unstable and contextual, depending on the situations and environments individuals are in.

Therefore, the conception of cultural identity in the context of multiculturalism revolves not only around differentiation but involves complex dynamics where individuals and groups interact and negotiate within the framework of cultural diversity. Cultural identity is not merely an attribute but an active process that continually evolves, shaping dynamics and patterns in highly diverse social interactions. Further research (Kim, 2018) highlights how cultural identity can be a powerful resource in building intergroup relationships, while research (Berry, 2004) emphasizes the importance of adapting cultural identities as an individual adaptation strategy in a multicultural context.

2.2. Power in Language

Research on power in language, inspired by works of (Fairclough, 2013) and (Foucault, 2013), provides explanations about the complex role of language as an instrument of power in multicultural societies. Fairclough emphatically highlights the importance of critical analysis of language, emphasizing that language not only reflects reality but also actively shapes and influences the process of forming reality itself (Fairclough, 2013). In this context, language functions not only as a communication medium but also as a highly influential tool in shaping perceptions, manipulating meanings, and directing power dynamics in complex multicultural societies.

Language is considered more than just a communication tool; it becomes a means to convey ideologies, reinforce power structures, and shape shared worldviews. This process includes the use of language in creating narratives, defining identities, and determining social boundaries. In other words, language not only creates reflections of reality but also helps shape reality itself.

The concept of power in language also considers how various groups in society compete to control meanings and social norms through language. This approach involves analysis of rhetorical strategies, narrative constructions, and communicative tactics used by power groups. Therefore, this research reveals that language is not just a neutral communication tool but also a battlefield where power and ideologies clash and compete for dominance.

Hegemony theory (Gramsci, 2013) provides an important theoretical basis for understanding the competition between groups in multicultural societies in controlling meanings and social norms through language. Antonio Gramsci highlights how dominant groups create hegemony by controlling cultural institutions, including language, as a strategy to maintain and strengthen their power positions. In a multicultural context, this theory can be applied to explore how groups compete to seize control of narratives, representations, and social norms through the use of language.

Hegemony in language involves mastery over the production of meanings and the determination of dominant discourses in society. In other words, groups that successfully dominate language often determine social norms, influence society’s views of truth, and position themselves as powerful groups.

2.3. The Influence of Technology on Language Interaction

Previous research (Crystal, 2012; Goggin & Hjorth, 2008) elucidates the impact of technology, particularly social media, on changing patterns of language interaction within
society. Goggin & Hjorth emphasize that social media create new spaces for communication, alter the dynamics of social interaction, and shape online identities (Goggin & Hjorth, 2008). Meanwhile, Crystal, 2012 highlights changes in the form and context of communication as a result of modern technological advancements (Crystal, 2012).

The concept of “the medium is the message” from McLuhan’s theory provides a relevant theoretical basis for understanding the influence of technology on language interaction (McLuhan, 1994). In this perspective, it’s not only the message conveyed through language that has an impact, but also the medium or technology used to convey that message holds its significance. For example, the use of social media not only affects how people speak but also contributes to the formation of online identities and changes in communication dynamics in multicultural societies.

The use of social media has become a crucial phenomenon in shaping socio-cultural dynamics, especially in the context of multicultural societies. Several studies have highlighted the significant impact of social media on changing social norms, cultural identities, and how communities perceive meaning through language.

Social norms, previously associated with conventional communication methods, undergo rapid transformation through interactions on social media. The use of emojis, abbreviations, and unique language structures on these platforms serves as tangible examples of how linguistic norms and communication ethics evolve alongside the digital technology evolution (Azzaakiyyah, 2023; Fischer & Reuber, 2011; González-Bailón & Lelkes, 2023).

Social media provide space for individuals and groups to express their cultural identities (Balick, 2023; Yau et al., 2020). Through social media, people can interact with communities worldwide, sharing similar interests and backgrounds and creating more inclusive and open cultural identity experiences.

The way communities perceive meaning through language also changes with the dominance of social media. Research indicates that these platforms offer possibilities to convey meaning more contextually and profoundly through various formats (Reyes et al., 2012). Language creativity flourishes as a result of interactions on social media, shaping more complex and profound meanings.

3. Research Methodology

This research employs a qualitative approach (Smith, 2008) to explore the socio-cultural linguistic dynamics within the context of multiculturalism in urban areas of West Kalimantan, Indonesia. The qualitative approach was chosen because it allows researchers to gain an in-depth understanding of complex and contextual phenomena such as language interaction in multicultural societies.

Research participants were purposively selected, considering diversity in cultural backgrounds, ethnicities, ages, and genders. Inclusion criteria encompassed individuals actively engaged in social interactions within the multicultural urban community. The sample selection technique was conducted through a non-probability purposive sampling approach (Quinn Patton, 2002). Researchers selectively chose individuals from various ethnic and cultural groups in West Kalimantan who exhibited characteristics relevant to the research objectives.

The research was conducted in West Kalimantan Province, Indonesia. The research location was chosen due to the province’s rich cultural diversity and significance as a representation of multiculturalism for understanding language interaction in urban communities.

Data were collected through two main methods: participatory observation and semi-structured interviews (Creswell & Poth, 2016). The participatory observation was carried out to
gain a direct understanding of language interaction in real-life situations within the multicultural society in West Kalimantan. Semi-structured interviews were used to delve into participants’ perceptions and experiences related to language use in multicultural contexts.

The collected data were analyzed using a thematic analysis approach. The steps of analysis involved data coding, theme development, and thematic interpretation (Braun & Clarke, 2006). The analysis was conducted considering factors such as cultural identity, power, stereotypes, and the influence of technology on language use within the multicultural society in West Kalimantan.

The research was conducted with adherence to research ethics principles, including anonymity, confidentiality, and trustworthiness. Participants were provided with information about the research objectives and their rights, and they were asked to provide written consent before participating. The research also respected ethnological considerations by honoring the culture and sensitivity to cultural differences in West Kalimantan, Indonesia.

4. Results and Discussion
4.1. Overview of Respondents
Out of the total of 100 respondents who participated in this research, the majority came from Dayak and Malay ethnic backgrounds, with minorities representing the Chinese and Javanese ethnicities. The age range of the respondents varied from 20 to 60 years old, with the majority falling within the age range of 25 to 40 years old. Additionally, there was an even balance between male and female participation in this study.

4.2. Language Variation in Occupational Contexts

In the agricultural and fisheries sectors, the commonly used language is Standard Malay or Standard Indonesian, as these occupations require clear and specific communication related to farming techniques, natural resource management, and relevant regulations. The use of formal language helps ensure accurate understanding among farmers or fishermen, minimizing errors in instructions or job-related communication.

On the other hand, in the trading sector, language use tends to be more casual and mixes regional languages with Standard Malay or Standard Indonesian. This occurs due to the more dynamic work environment and interactions with customers from various cultural backgrounds. In this case, the use of more relaxed and mixed language reflects efforts to build closer and more inclusive relationships with customers, as well as adapting communication to their needs and preferences.

Standard Malay is the most widely spoken language in West Kalimantan. Some communities in West Kalimantan refer to it as Melayik language. Speakers of Malay are scattered throughout the districts and cities as well as in the inland villages of West Kalimantan (Badan Pengembangan dan Pembinaan Bahasa Kementerian Pendidikan dan Kebudayaan Republik Indonesia, n.d.). Although Standard Malay or Standard Indonesian is often used as the official language, it is mixed with regional languages to enhance the comfort and effectiveness of communication, especially in trading situations involving interactions with customers from diverse cultural backgrounds. The variation in language use reflects efforts to build closer relationships and respect cultural diversity in multicultural work environments. In the context of communication among different ethnic groups, these findings indicate adaptation in communication styles.

4.3. Social Interaction in Public Spaces

Multicultural social interaction in public places, such as traditional markets and places of worship, forms a linguistic landscape that reflects the ethnic plurality and cultural richness in West Kalimantan. In this context, language is not just a means of communication but also a symbol of ethnic and religious identity that shapes the core of the social and cultural diversity of the community.

Source: (Dinas Kependudukan dan Catatan Sipil Provinsi Kalimantan Barat, 2021)

From a linguistic perspective, traditional markets are places where various local and national languages blend. Sellers and buyers from different ethnicities use their respective languages to conduct trade transactions. This linguistic variation reflects ethnic and cultural diversity, while the use of language in a trade context demonstrates a strong pragmatic influence in the selection of language used.

On the other hand, places of worship serve as arenas where various languages and dialects are used in a religious context. Followers from different ethnic backgrounds gather to perform worship and other religious activities. Language is used to convey religious values, social norms, and religious messages. In this context, language serves not only as a means of communication but also as a medium that strengthens religious identity and facilitates social integration among ethnic groups.

From the perspective of pluralism and socio-cultural diversity, social interaction in these public spaces demonstrates harmony among various ethnic and religious groups in building an inclusive society. Language serves as a bridge that connects individuals from different cultural backgrounds, creating space for mutual understanding and tolerance. The diverse use of language reflects the principles of pluralism and diversity in society. At the same time, peaceful and respectful interactions in public places reaffirm the spirit of cross-ethnic and interfaith cooperation.
Multicultural social interaction in public places involves not only verbal communication but also the formation of collective identity and the fostering of harmonious inter-ethnic relations in society. Through the diverse use of language and acceptance of cultural diversity, the people of West Kalimantan strengthen the foundation of pluralism and social integration that enriches communal life.

One of the main challenges faced is the difference in languages and dialects used by various ethnic groups in public places. This linguistic variation can sometimes hinder effective communication between ethnic groups, leading to confusion or misunderstanding. However, with an approach of mutual respect and appreciation, communities learn to understand and accept linguistic differences as part of the rich cultural diversity in West Kalimantan.

Another challenge that often arises is the presence of stereotypes or prejudices between ethnic groups that can hinder the formation of harmonious social relationships. These stereotypes can influence societal perceptions of other ethnic groups and impede the integration process (Lebedko, 2014). However, by applying local wisdom and cultural customs that emphasize values such as cooperation, mutual assistance, and togetherness, communities succeed in overcoming these stereotypes and prejudices, forming strong bonds among various ethnic groups.

Furthermore, the complexity of religion and culture can also pose challenges in multicultural social interaction. Differences in beliefs and religious practices often become a source of conflict or tension in some multicultural societies (Nakaya, 2018). However, by respecting and appreciating religious diversity and the local wisdom that underpins interfaith relations, communities can create an inclusive and supportive environment in places of worship and other religious activities.

4.4. Informal Conversations among Neighbors in Residential Communities

Informal conversations among neighbors in residential communities in West Kalimantan exhibit communication patterns that are inclusive and mindful of ethnic diversity. Language serves as the primary means of communication, facilitating the exchange of information, stories, and experiences among neighbors from various ethnic backgrounds. In this context, language is not only a functional communication tool but also a means to strengthen social relationships and build bonds among residents.

Informal conversations among neighbors often take place in residential areas, such as on the front porch or in the front yard. Here, neighbors exchange information about daily activities and environmental conditions or share stories about their life experiences. The use of diverse languages reflects the ethnic diversity in West Kalimantan, where various ethnic groups live together in one community.

These informal conversations are not only about practical information exchange but also about creating strong social bonds among the local community (Ahn, 2021; Vincent et al., 2018). Through daily interactions, neighbors get to know each other and form a solid community. Language serves as a medium that enables them to build cooperation, support each other, and celebrate cultural diversity.

The importance of language in informal conversations among neighbors is also reflected in the formation of community identity and the strengthening of social relationships at the local level. The use of diverse languages not only enriches communication experiences but also allows the people of West Kalimantan to maintain their cultural diversity while reinforcing solidarity in everyday life.
4.5. The Role of Language in Preserving Cultural Identity

In West Kalimantan, language serves not only as a means of communication but also as a symbol of ethnic identity that is central to the lives of its people. More than just conveying communicative messages, language functions as a network that connects individuals to their traditions, cultural values, and ancestral heritage.

Language becomes the primary catalyst in preserving traditions (Mailin et al., 2023). Through language, oral stories, legends, and ancestral knowledge are passed down from one generation to the next. Every word, idiom, or expression not only carries literal meaning but also embodies cultural heritage that permeates daily life. Language serves as the main tool for nurturing cultural continuity, ensuring that ancestral stories remain alive and relevant.

Furthermore, language plays a significant role in upholding cultural values. Norms, ethics, and moralities encapsulated in language reflect the worldview of the community. Through the use of distinct language, they can creatively express these values. Thus, language is not only a medium of communication but also a stage where cultural values are performed and preserved.

The ancestral heritage, often interwoven in language, forms the basis of ethnic identity. Language creates emotional ties to cultural roots, instilling a sense of pride and reinforcing the community’s ownership of their ethnic group. Within the framework of high ethnic diversity, language serves as a social adhesive that unites communities in their diversity.

The role of language in preserving cultural identity in West Kalimantan extends to spiritual, emotional, and value dimensions that shape the essence of the cultural diversity of the society.

5. Conclusion

The research findings underscore the importance of language as a crucial tool in facilitating social interaction among ethnic groups and preserving cultural diversity in West Kalimantan. In the context of employment, the variation in language use is related to individuals’ sectors of work. In the agricultural and fisheries sectors, language tends to be formal, while in the trading sector, language is more casual and blends local and national languages. This phenomenon reflects the complexity of language interaction in a multicultural work environment.

Interactions in public places, such as traditional markets and places of worship, also demonstrate variation in language use. In markets, local and national languages blend in buying and selling transactions, while in places of worship, various languages are used in religious contexts. This reflects the rich cultural harmony in West Kalimantan, where various ethnic groups are able to interact positively and respect each other.

Further studies could broaden the scope to delve deeper into the influence of technology and social media on language interaction patterns in the context of multicultural societies. Additionally, future research could explore the role of educational institutions in promoting cross-cultural and multilingual understanding to strengthen social integration in multicultural societies.
